Re: UM 1140 – Trunk Configurations

Dear Sir/Madam:

During the course of the hearing in UM 1140, Qwest witness Linse was asked to accept certain matters concerning the trunk configurations between Beaver Creek Cooperative Telephone Company (BCT) and Qwest Corporation as a matter "subject to check." ALJ Petrillo asked that the parties be able to confirm what the witness was asked on a "subject to check" basis.

Attached are two trunk diagrams that show the trunking arrangements: (1) for local/EAS trunking and (2) for trunking to the access tandem. On the local/EAS trunk diagram, it shows that there are two trunks for 911 purposes that are routed on a diverse basis. It shows that there are 360 traditional EAS trunks running between the BCT switch and the Qwest Portland local/EAS tandem. It also shows that there are an additional 48 LIS trunks running between BCT's switch and the Qwest local/EAS tandem. The local/EAS tandem is noted as PTLDOR1350T. The trunk diagram also shows 96 trunks between the BCT switch and the Qwest Oregon City switch. Finally, the diagram shows 46 trunks running between the BCT switch and Qwest's Milwaukee switch.

In the diagram depicting trunking to the access tandem, there are 9 trunks labeled TSPS, which are operator service trunks. There are 96 trunks between the BCT switch and the Portland access tandem (PTLDOR13C9T). In addition, there are 24 more LIS trunks from BCT's switch to that same

tandem.

The trunking diagrams have been reviewed by Qwest. Qwest agrees that the diagrams are accurate depictions of the trunking relationships between the two companies. Qwest suggested some changes to the descriptions contained in this letter. Most of the changes have been incorporated. The few that were not were discussed with Mr. Duarte earlier this week and he authorized the submission of this letter, subject to hearing from his client by the close of business on March 22, 2005. No further word has been received from Qwest.

Qwest also suggested that the two diagrams have a slight change in title. Qwest suggested that the first diagram be labeled "BCT-Qwest EAS & LIS Local Trunk Inter-connection Diagram" and the second diagram be labeled "BCT TG# 334/Qwest TG# AP087435: 48 Trunks (LIS-Local)." Given that the diagrams are PDF documents and given the passage of time and the relatively small difference in labels, the change has not been made. BCT does not believe the difference in labels is pertinent and has no objection to either label.

BCT suggests that the trunk diagrams be assigned Exhibit Nos. BCT/13 and BCT/14, respectively.

Sincerely,

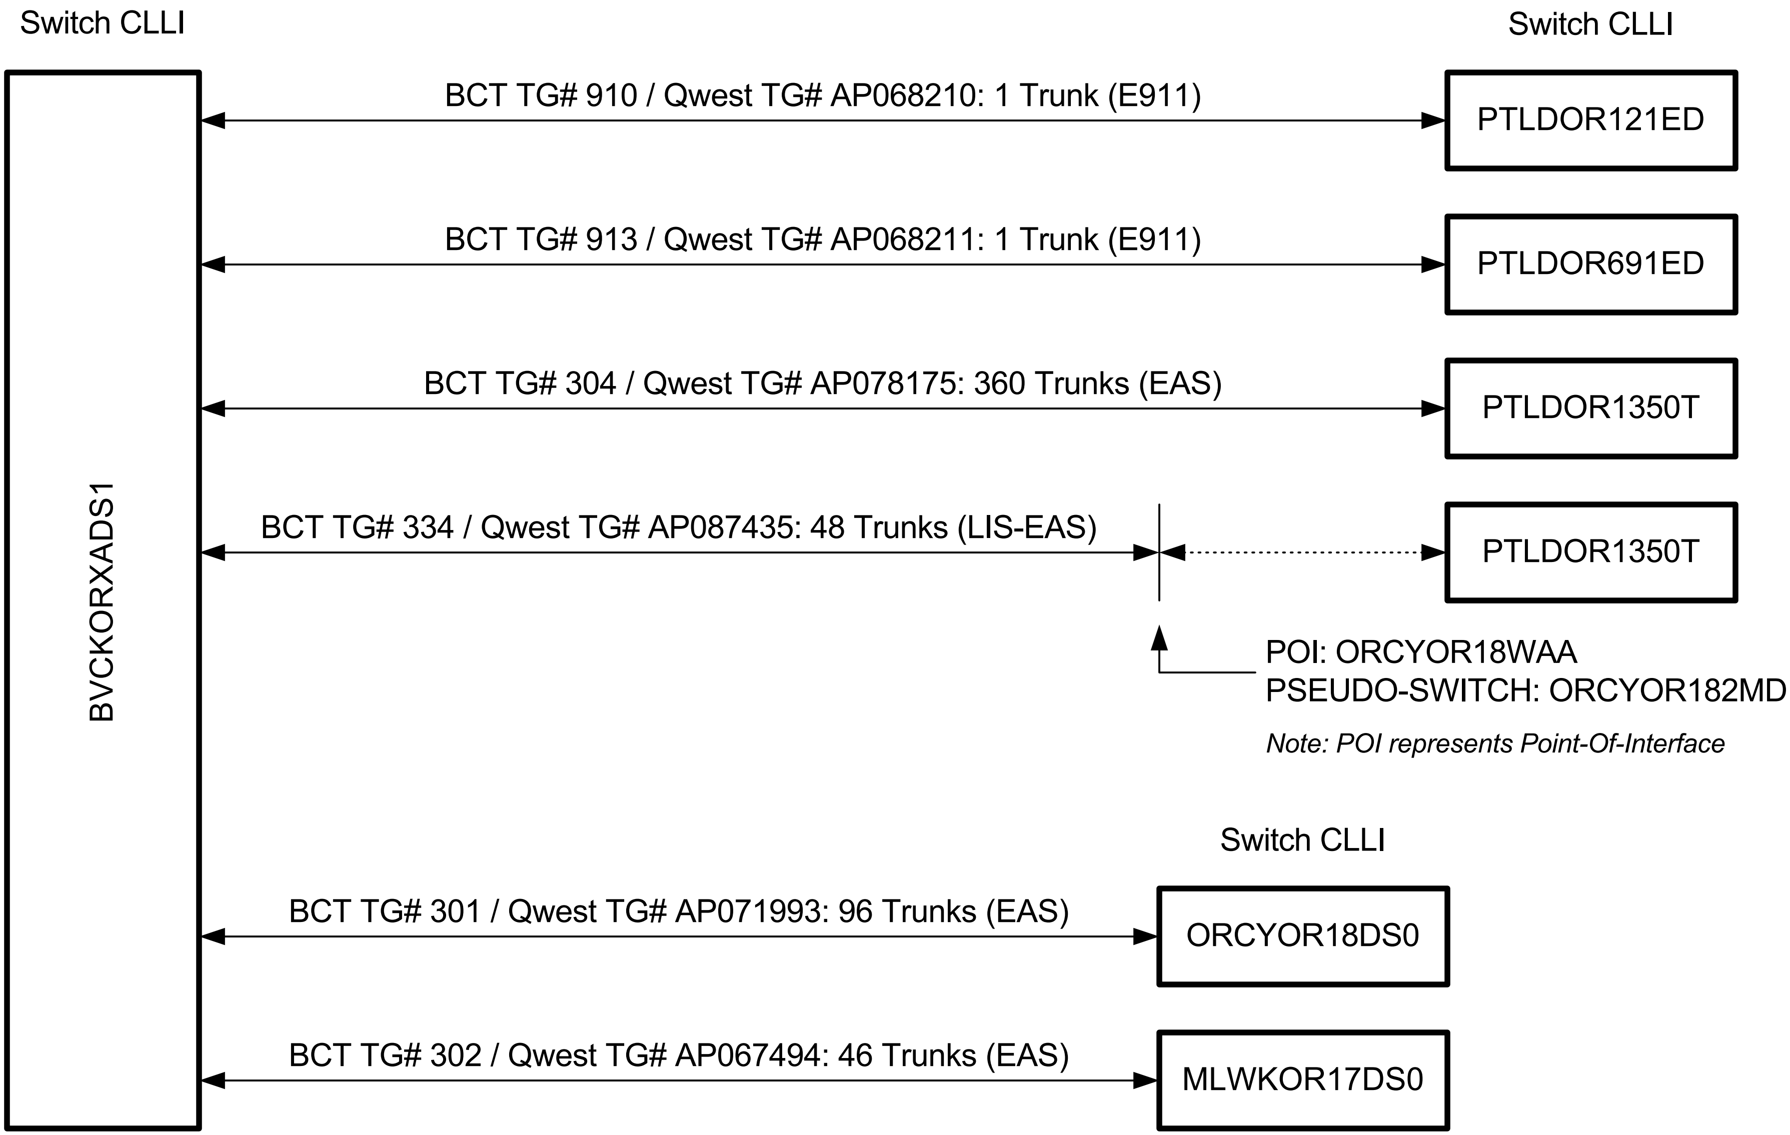

s/Richard A. Finnigan
